

Return to Riege: Gebrüder Weiss convinced of Scope ATLAS

Meerbusch/Lauterach – Gebrüder Weiss has been offering customized transport and logistics solutions for more than 500 years. The international transport and logistics company has been using the freight forwarding and customs software Scope for customs declarations in road transport in Germany, Austria and Switzerland since 2022 and is more than satisfied with the return to Riege.

The history of cooperation between Gebrüder Weiss and Riege Software goes back to the days of Procars and Johannes Riege as Managing Director. Even back then, the family-run company from Austria was looking for a sophisticated system for customs declarations and opted for the predecessor of today's product Scope. After many years of successful cooperation, the company switched to a different provider in 2011. More than ten years later, the transport company was faced with making another decision. The old solution no longer met the requirements, and a new software solution seemed necessary. The decision in favor of Riege and Scope came quickly. Scope is widely known in the industry as the leading freight forwarding and customs software and is popular among large and small transport companies:

“One factor contributing to the decision was the good reputation of Riege and Scope. Among other things, the expert knowledge of the service employees was particularly emphasized, as they have often previously worked in a forwarding company and therefore know exactly which issues we deal with in our daily operations and how we can best use Scope to handle them. Especially in Customs, the knowledge of the business consultants is very comprehensive. The

decision was therefore easy one for us and we were pleasantly surprised at how quickly the changeover worked. Scope was up and running in just four weeks”.

– *Werner Dettenthaler, Regional Manager Land Transport Germany at Gebrüder Weiss*

“We are proud to call a company with such a great tradition as Gebrüder Weiss our customer. It is no coincidence that the corporate values of Gebrüder Weiss also reflect our values to a large extent. We also strive to operate sustainably and are proud of our independence. Besides our values, we are delighted that our software and our service are a perfect fit for Gebrüder Weiss,” Tobias Riege, CEO of Riege Software comments.

ABOUT GEBRÜDER WEISS

Gebrüder Weiss Holding AG, based in Lauterach (Austria), is a global full-service logistics provider with around 8,400 employees and 180 company-owned locations. Most recently, the company generated annual sales of EUR 3 billion (2022). Its portfolio includes transport and logistics solutions, digital services and supply chain management. The combination of digital and physical expertise enables the Group to respond quickly and flexibly to customer needs. With a wide range of ecological, economic and social measures, the family-owned company, whose history in transportation goes back more than 500 years, is now also considered a pioneer in terms of sustainable business practices.

ABOUT RIEGE SOFTWARE

Riege Software is the creator of Scope, the leading cloud-based software for Air Freight, Ocean Freight and Customs. Designed to be the Digital Standard for digital logistics, Scope enables participants in the global supply chain to practice unrestricted collaboration with just one system.

Established in 1985 and ever since privately owned and managed, Riege has a continuous and sound understanding of the requirements of the logistics

industry, serving more than 575 companies of any size in 46 countries. The future of logistics is digital. Scope is the future of digital logistics.

■ Background information

Early years

Riege Software was founded in 1985 by Johannes Riege, a pioneer in software development for the logistics industry. The acknowledged industry expert combined his programming skills with the knowledge of a need for a software solution to unify processes in logistics and created a cross- industry system called Procars® (Professional Carriage System). Initially programmed on Datapoint, the system rapidly adopted to the market and created a high level of customer satisfaction among the world's largest logistics companies through continuous technical development and innovative usability.

Company development

With the expansion of the logistics industry, the demand for a digital solution in the form of a transport management system that combined state-of-the-art technology with the growing requirements within the industry also grew. Under the leadership of Christian Riege, one of four siblings involved in the company's management, Riege Software met this demand with the development of Scope® in 2009. Scope®, the Digital Standard for Digital Logistics, is applied by companies of all sizes worldwide. The internationally operating family business has grown from its beginnings, with subsidiaries in the Netherlands, Switzerland, the USA and Mexico, as well as in Hong Kong and Singapore, in addition to its headquarters in Meerbusch.

Vision

We understand that boundless networking within the global supply chain is the measure to secure and shape the future of logistics. Through digitalization with human in mind we lay the foundation for the global logistics community – enabling its members to cross borders, traverse countries, stretch across continents, and span the globe freely.

Mission

We make the expertise of local companies accessible on a global scale by paving the way for independent entities to join the global logistics community. Therefore we provide global logistics with the digital standard – empowering players in the global supply chain to achieve their business goals as well as individual human well-being by easing their daily routine.

Company Values

Respect

We are always as willing to compromise as we are capable of conflict. Mutual respect across all borders and nationalities is a matter of course for us.

Integrity

We value integrity more than strategic action and mistaken perfectionism. We always give our best, but honestly say what is not possible.

Sustainability

We prefer planned growth over short-term results. That is why we cultivate long-term partnerships, “with a Human Heart” and a smile at the right time.

Cooperation

We cooperate willingly and benevolent cross teams and branches. Mutual assistance is for the benefit of our common goals and therefore for the benefit of us all.

Scope® – the future of digital logistics

Designed as a transport management system for air freight, ocean freight and customs, Scope is the Digital Standard for logistics. Faster, more efficient and multi-functional, Scope combines all key functions with state-of-the-art, user-friendly, cloud-based software architecture.

Scope enables forwarders and shippers to easily and efficiently manage the entire logistics process while complying with all legal requirements. As Software as a Service (SaaS), the freight forwarding software Scope is always up-to-date through continuous updates and offers one of the leading solutions for integrated supply chain management. A user-friendly interface and intuitive data entry simplify and streamline all operational processes. Integrated interfaces also enable smooth global data exchange.

As a freight forwarding software from the secure Riege Software Cloud, Scope also allows all customers to access the system from any location, thus enabling freight orders and customs clearance to be completed regardless of their location.

Associations and interest groups

Riege Software has more than 550 freight forwarders, airlines and manufacturing companies in 41 countries among its customers and cooperates with numerous providers of services for the economic handling of transports, actively participates in committees, working groups and networks and collaborates with institutions and academies to promote the industry.
