

Riege Software welcomes Jeanne Graf as new Managing Director in Switzerland

Meerbusch/Bassersdorf - Riege Software, leading provider of software solutions for logistics, announces that Jeanne Graf will take over the management of the Swiss branch. With her years of experience in the freight forwarding industry and her commitment to Riege Software's core values, Graf will play an important role in the further development of the Swiss operation.

Graf has already proven herself in various positions at Riege, ranging from customer support to product management. Her extensive industry knowledge and ability to build and maintain customer relationships make her an ideal fit for the position. In an interview, she commented on her appointment: "The journey is the reward. I therefore see the role of Managing Director as an exciting challenge that will allow me to develop personally. Both privately and professionally, I have received nothing but encouragement so far. This encourages me to take on these new tasks. It is important to me that we continue to focus on our core values of respect, sustainability, integrity and cooperation."

Jeanne Graf will play a key role in driving Riege Software's values and growth in Switzerland. "For me, sustainability and respect are two very important values that Riege Switzerland will continue to pursue in the future. Open communication at eye level with customers and employees will be my strength," emphasized Graf.

Anna Riege, Chief People Officer (CPO) of Riege Software and President of the Board of Directors of Riege AG, also commented positively on the appointment of Jeanne Graf:

“Riege strives to understand the challenges of its Swiss customers and to promote their sustainable growth. Jeanne will support the Swiss clients in her new role as Managing Director and help Riege to develop sustainably in Switzerland.” The appointment of Jeanne Graf as the new Managing Director underlines Riege Software's commitment to developing and nurturing talented people and continuously improving its services and products.

ABOUT RIEGE SOFTWARE

Riege Software is the creator of Scope, the leading cloud-based software for Air Freight, Ocean Freight and Customs. Designed to be the Digital Standard for digital logistics, Scope enables participants in the global supply chain to practice unrestricted collaboration with just one system.

Established in 1985 and ever since privately owned and managed, Riege has a continuous and sound understanding of the requirements of the logistics industry, serving more than 700 companies of any size in 60 countries. The future of logistics is digital. Scope is the future of digital logistics.

■ Background information

EARLY YEARS

Riege Software was founded in 1985 by Johannes Riege, a pioneer in software development for the logistics industry. The acknowledged industry expert combined his programming skills with the knowledge of a need for a software solution to unify processes in logistics and created a cross- industry system called Procars® (Professional Carriage System). Initially programmed on Datapoint, the system rapidly adopted to the market and created a high level of customer satisfaction among the world's largest logistics companies through continuous technical development and innovative usability.

COMPANY DEVELOPMENT

With the expansion of the logistics industry, the demand for a digital solution in the form of a transport management system that combined state-of-the-art technology with the growing requirements within the industry also grew. Under the leadership of Christian Riege, one of four siblings involved in the company's management, Riege Software met this demand with the development of Scope® in 2009. Scope®, the Digital Standard for Digital Logistics, is applied by companies of all sizes worldwide. The internationally operating family business has grown from its beginnings, with subsidiaries in the Netherlands, Switzerland, the USA and Mexico, as well as in Hong Kong and Singapore, in addition to its headquarters in Meerbusch.

VISION

We understand that boundless networking within the global supply chain is the measure to secure and shape the future of logistics. Through digitalization with human in mind we lay the foundation for the global logistics community – enabling its members to cross borders, traverse countries, stretch across continents, and span the globe freely.

MISSION

We make the expertise of local companies accessible on a global scale by paving the way for independent entities to join the global logistics community. Therefore we provide global logistics with the digital standard – empowering players in the global supply chain to achieve their business goals as well as individual human well-being by easing their daily routine.

Company Values

RESPECT

We are always as willing to compromise as we are capable of conflict. Mutual respect across all borders and nationalities is a matter of course for us.

INTEGRITY

We value integrity more than strategic action and mistaken perfectionism. We always give our best, but honestly say what is not possible.

SUSTAINABILITY

We prefer planned growth over short-term results. That is why we cultivate long-term partnerships, “with a Human Heart” and a smile at the right time.

COOPERATION

We cooperate willingly and benevolent cross teams and branches. Mutual assistance is for the benefit of our common goals and therefore for the benefit of us all.

Scope[®] – the future of digital logistics

Designed as a transport management system for air freight, ocean freight and customs, Scope is the Digital Standard for logistics. Faster, more efficient and multi-functional, Scope combines all key functions with state-of-the-art, user-friendly, cloud-based software architecture.

Scope enables forwarders and shippers to easily and efficiently manage the entire logistics process while complying with all legal requirements. As Software as a Service (SaaS), the freight forwarding software Scope is always up-to-date through continuous updates and offers one of the leading solutions for integrated supply chain management. A user-friendly interface and intuitive data entry simplify and streamline all operational processes. Integrated interfaces also enable smooth global data exchange.

As a freight forwarding software from the secure Riege Software Cloud, Scope also allows all customers to access the system from any location, thus enabling freight orders and customs clearance to be completed regardless of their location.

Associations and interest groups

Riege Software has more than 7000 freight forwarders, airlines and manufacturing companies in 60 countries among its customers and cooperates with numerous providers of services for the economic handling of transports, actively participates in committees, working groups and networks and collaborates with institutions and academies to promote the industry.
